

HealthSource of Ohio - Your Medical Home

A Patient Centered Medical Home (PCMH) is a model of care that strengthens the provider-patient relationship by providing coordinated care and a long-term medical relationship.

HealthSource of Ohio ensures each patient has an ongoing relationship with a personal health care provider of the patient's choice, providing for the patient's health care needs and coordinating suitable care with other qualified providers. HealthSource offers family practice, pediatrics, ob/gyn, dental, behavioral health, and pharmacy services. The Patient Centered Medical Home is intended to result in a more personalized, coordinated, effective, and efficient care, based on evidence-based guidelines.

HealthSource, as your medical home, achieves these goals through a high level of accessibility, providing excellent communication among patients and providers, and using the latest information technology to prescribe, communicate, track test results, obtain clinical support information, and patient satisfaction.

HealthSource providers ask for you to please provide us with any information regarding your health care at each visit, including over-the-counter medications you take and any data from recent hospitalizations, specialty care, or ER visits.

Improved Access to your Medical Team

- You can communicate with the medical home team anytime during normal working hours by calling the office of your chosen medical provider. Enhanced access to care is available through expanded hours and doctor on call after normal working hours.
- Outside normal working hours please call the office of your chosen medical provider and follow the instructions.
- Please continue to call 9-1-1 for all emergencies.
